● CONTRACT MANAGEMENT ● PROCESS MANAGEMENT

Context

The APICIL Group is fully in line with developments in the additional pension plans. As such, an implementation of a new desktop publishing tool associated with document management is requested by Agirc / Arrco federations.

Mission

The mission of d²X Expertise is to support the APICIL project's governance milestones (deployment).
The following actions are thus to be carried out:
- Accompany the person responsible for the project's scope with the organization of the activities,
- Monitor the project's dimensions,
- Steer the project's phases,
- Prepare project's phases internally,
- Coordinate with business units,
- Accompany the stakeholders through the process until the project's realization

Issues & goals

The main challenges of this mission were:
- Respect the tight implementation deadlines of the desktop publishing tool and EDM solutions,
- Ensuring the smooth flow of information between the different concerned entities (Girc, Ircem, Apicil and Malakoff Médéric).

Benefits

The intervention of d²X Expertise has made it possible to:
- Reinforce the existing team in place on the tasks of preliminary studies and standardization of letters,
- Identify vigilance points and how to manage risks when deploying the Alfresco EDM solution.
